The biomedical effects of laser application

Dr. Endre Mester MD\textsuperscript{1,*}, Andrew F. Mester MD\textsuperscript{2}, Adam Mester MD\textsuperscript{3}

Abstract

This paper briefly reviews the authors’ experimental and clinical use of lasers over a 20-year period, during which laser effects on 15 biological systems were studied. Low-energy laser radiation was found to have a stimulating effect on cells, and high-energy radiation had an inhibiting effect. The application of lasers to stimulate wound healing in cases of nonhealing ulcers is recommended.
